JN. 09/60176/

ABSTRACT

The present invention relates to an information providing apparatus and an information providing apparatus. The display screen is switched to a predetermined display screen and receives processing on this predetermined display screen by operation of another operation key. Thus, in case where the present invention is applied to a set-top box for digital satellite broadcasting or the like to provide a large number of programs by various selection methods, the number of operation keys of a remote control device is prevented from being increased, so the operationality can be improved.
